PRO SKILLS

HTML CSS / SASS

JavaScript

TypeScript

React / Redux

Git

Figma

Webpack / Gulp

LANGUAGE

English (A2)

Russian (Native)

EXPERIENCE

2021 - 2022   **road to Front-end developer**

The beginning of self-study of the very basics of Front-end development.
• HTML/CSS/SASS was studied by the method of layout of landing pages, multi-page sites. I created a slider in pure css and various animations. Studied the semantics and methodology of BEM. I learned how to write proper HTML and CSS. I studied SASS, which simplifies CSS writing.
• I studied JavaScript, solving problems on CodeWars 4-8 kyu, created interactive elements on the site page, such as (slider, video player, forms, pop-ups). I used JS to interact with DOM elements. I made an analogue of the Momentum application on pure JS. I learned how to work with asynchronous functions and APIs.
• Git/Npm All my projects are on github, I studied how to use git correctly in practice when developing my projects. Npm has been studied in practice when installing various libraries.
• React/Redux/TypeScript was learned by creating a favorite SPA project "English quiz". In this project, I applied all the knowledge I had previously gained in HTML, CSS, SASS, JS, TS. Asynchronous functions, pop-ups, interactive user interaction. Storing data in local storage and the like. In parallel, he mastered writing pure components (class, functionality), Redux, state management, using props, redux thunk.

Projects

SPA (Art-quiz)
SPA on pure JS

pain4metoo.github.io/myProjects/art-quiz/

Art Quiz is a quiz application for the knowledge of masterpieces of painting and their authors.

SPA (Momentum)
Analog of the Momentum application

pain4metoo.github.io/myProjects/momentum/

Momentum is an analog of the application of the same name in the Chrome online store. The app shows the time and the username. The background image and greeting change depending on the time of day.

Landing Page (Museum louvre)
Tour of the Louvre

pain4metoo.github.io/myProjects/museum/

There is a ticket purchase card with validation on the landing. During the development, pure HTML, CSS, Javascript was used without the use of frameworks and various libraries.

About me

Nationality
Belarus

Relationship
Single

Education
Specialized secondary education

At the moment I am raising my English level to B2. In the future, I want to study node js and next js in order to become a useful specialist in the company where I will work. I am able to solve tasks independently, I find information very well. A positive and sociable person. I ask a lot of questions :)
You will find more information about me on my website or on github.
